

The right TEVAR stent-graft, every time

AllStent Appoints Dr Santi Trimarchi MD as Chair of CAB

“Santi’s appointment as Chair to our CAB makes us very proud. A truly wonderful human being, and eminent vascular surgeon, clinician and researcher. I only hope our nascent relationship can survive a possible 2025 Inter Milan v Arsenal knock-out clash in the UEFA Champions League,” said (a slightly worried) Paul Chipperton, CEO

Date of release: Monday Feb-17

Locations: Toronto, Canada; and Milan, Italy

AllStent, with Business, Finance and Regulatory operations in Toronto, Canada; and Research & Development in Milan, Italy, is pleased to announce the appointment of Dr Adam Power MD to our Clinical Advisory Board (CAB).

Prof. Santi Trimarchi, MD, PhD is Full Professor of Vascular Surgery at Università degli Studi di Milano, and he is Head of the Vascular Surgery Unit at Fondazione IRCCS Ca’ Granda Ospedale Maggiore Policlinico in Milan (Italy). Through 30-years of career, his clinical-surgical and research activity focuses on the study and treatment of aortic diseases, including primarily aneurysms and dissections, but also of many other vascular diseases such as carotid stenosis, arteriopathies of the lower limbs and superficial and deep venous pathologies. To date he has performed more than 4000 operations. Extensive trans-atlantic experience has materialised through additional research and scholarly activities at Utrecht University, Holland; and Yale University, University of Michigan, University of Florida-Gainesville, and Harvard Medical School, USA. In the last 7 years he has been included as member in the writing committee of Aortic Diseases Guidelines by ESVS, SICVE, and the European Association Cardio-Thoracic Surgery (EACTS) in conjunction with the Society for Thoracic Surgeons (STS).

ABOUT AllStent

AllStent was formed in July 2024 as a spin-out of Politecnico di Milano, Italy (Polimi), co-founded by a young female team of PhD's and Post-Docs from Dr Migliavacca's *in silico* medicine group in Computational Biomechanics. Just since 2019, with >70 academic peer-reviewed publications on the topics of cardiovascular and neurovascular mechanics, the company was formed to commercialise in the area of greatest need, pre-operative planning and post-operative complication assessment of complex TEVAR surgeries.

Delivering an unmet market pull directly from surgeons, AllStent is offering unique patient-specific high-fidelity 3D-simulations and accurate "digital twins" of the anatomy and TEVAR procedure, range of optimal stent-grafts, and best-fit and post-deployment risk analysis.
